CDCB Conflicts DHI-560: Background and Purpose

With producer consent, DRMS shares individual animal data with CDCB for the purpose of calculating genetic values. CDCB compares data submitted by DRMS against pedigree information submitted by breed associations, and lactation data previously submitted to CDCB. The DHI-560 report serves to indicate animals that have conflicting identity information at CDCB. For example, a cow, sire, or dam identity may be assigned to another animal. Animals with identity conflicts may be excluded from genetic evaluations until these conflicts are resolved.

About:

DRMS sends animal data to CDCB following the completion of a processed test day. Any conflicts found by CDCB are then included on the DHI-560 report mailed by DRMS. It is important to recognize that due to differences in processing time between DRMS and CDCB, conflicts are only current as of the previous processed test day. The DHI-560 exclusively includes first-lactation cows. Cows will appear on the report for two sequential test days. Cows that have been included on the report for two sequential test days will not be included for a third.

Action:

Conflicts should not be assumed to be errors. Animals present on the DHI-560 have been identified to have a conflict between data reported on farm and data that already exists at CDCB. It is advisable for producers to review the data for accuracy and report any necessary changes to their technician or service affiliate or by email to DRMS support staff at drms@ncsu.edu.

DRMS sends data to CDCB to compute genetic information for cows, heifers and bulls. CDCB compares your data with pedigrees from Breed Associations and previously submitted lactation data at CDCB. Cows on this report failed the edits; so CDCB cannot compute genetic values and their records will not be used for their progeny or in sire evaluations.

Please correct conflicts below and give the form to your DHI Field Technician or send corrections directly to DRMS at this address **DRMS, Suite 100, 313 Chapanoke Road, Raleigh, NC 27603.**

If you have questions, please contact your DHI Service Affiliate. To discontinue receiving this report, please ask your DHI Technician to send a message to DRMS.

CDCB Conflicts

DHI-560

Test Date: 01-23-2025

Processed: 01-23-2025

Page 1 of 3

CONFLICT: Cow, Sire, or Dam identity used by another animal.

ACTION: Check identity and breed for cow, sire, and dam. Write corrections above incorrect information

	Cow	Sire	Dam										
	Index	Brd	Identity	Barn Name	Birth Date	Calving Date	Brd	Identity	Birth Date	Brd	Identity	Birth Date	Calving Date

To report changes to animals on the DHI-560:

1. Make any necessary ID corrections in Dart
2. If the producer does not use Dart, report the correct cow, sire, or dam information on the space provided on the DHI-560
3. If the animal's information reported by CDCB is incorrect please indicate this directly on the DHI-560 and return it to DRMS by email at drms@ncsu.edu

Opting Out:

If a producer does not wish to be notified about animal identity conflicts at CDCB, they may opt out of receiving the DHI-560 report. To opt out, please indicate the producer's intent in special handling on test day or contact DRMS directly at 919-661-3120 or by email at drms@ncsu.edu.
