Importing Suggested Service Sires

Sire mating suggestions can be imported directly into Dart in a few easy steps. Work with your service provider to receive the file using either Bull Name or NAAB code based on your preference.

Options Available:

- Accelerated Genetics
- Alta Genetics
- ABS Global
- Genex
- Select Sires
- Jersey Cattle Association
- Holstein Association Multi-Mate

1. Select **Tasks > Import/Export > Import Service Sire Recommendations**.
2. Next to the name of the company providing the mating suggestions, select whether the file is formatted by **Index Number** or **Barn Name**. If the company is not listed, we can still import results using our Flexible Import tool.
3. Click **Import** and browse to select the file.
4. Click **Open**. A SuggSire.log will appear momentarily with import status information. Click **close** then **close** again to completely exit.
5. To view your imported file results, select the **cow page icon** then the **Id/Gen** tab. The imported suggestions will be shown in the Suggested Service Sires box. If there was no mate for a specific service number, that field will be blank.
6. Use DBIs 308 Suggested Sire #1, 309 Suggested Sire #2 and 310 Suggested Sire #3 to add your Suggested Service Sires to any Dart report.

Tasks Help

- Get New Data From DRMS
- Update after Test Day
- Download Tech's Rates...
- Download On-Farm Billing
- Download Genetic Update
- Send Test Day Files to DRMS
- Import / Export**
