

Dairy Goat Producers

Trusted Data and Decision Tools

How It Works

DRMS helps dairy goat producers maintain complete herd records and turn trusted data into informed management decisions.

Using DHI testing, herd reports, Dart, and PocketDairy, producers can monitor herd performance, identify trends, and improve long-term herd management.

What It Supports

DHI Testing & Reports

Monitor production, reproduction, genetics, and herd performance with official herd records and flexible reports.

Dart Herd Management Software

Manage doe records, breeding information, health events, and herd data with proven herd management software.

PocketDairy

Access doe information and enter data anywhere with the PocketDairy mobile app.

Meaningful Herd Insights

Turn herd data into practical insights that support breeding decisions, monitor herd performance, and improve long-term herd management.

Exceptional Support

Partner with knowledgeable DRMS staff and your local DHIA for responsive support, practical training, and expert guidance.

Answer the Questions in Your Goat Herd Data

Where Dairy Goat Records Help

DHI reports and Dart work together to summarize herd performance over time and provide the information needed to make informed management decisions.

Dairy goat records help you quickly answer common management questions, such as:

Production

How does milk production compare across lactations?

Reproduction

Should this doe be bred again?

Herd Health

Are somatic cell counts increasing in specific groups?

Herd Management

What herd trends are emerging over time?

See how DRMS supports dairy goat producers.
