Tip Tuesday!

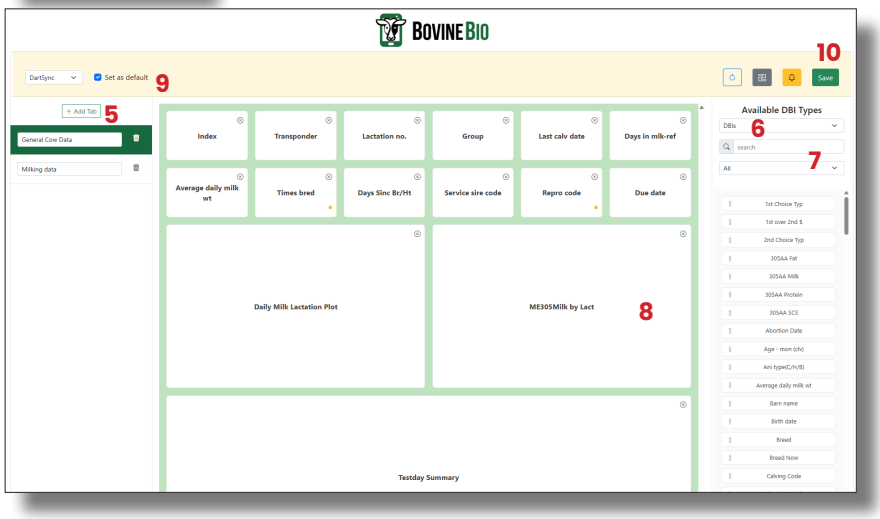

Create Mobile-Friendly Custom Cow Pages with BovineBio

BovineBio allows users to effortlessly build custom cow pages with grids, graphs, and database items for reference or to make quick decisions. Create multiple tabs for different management areas or highlight the most important information on a single tab. BovineBio lets you easily view specific individual animal data with full access to all data with the direct link to CowCompass. Set alerts for instant visual attention, export graphs to other programs, or print entire dashboard. Similar to other HerdHQ products, BovineBio can use dynamic DartSync backup data or the most recent Test Day data to analyze.

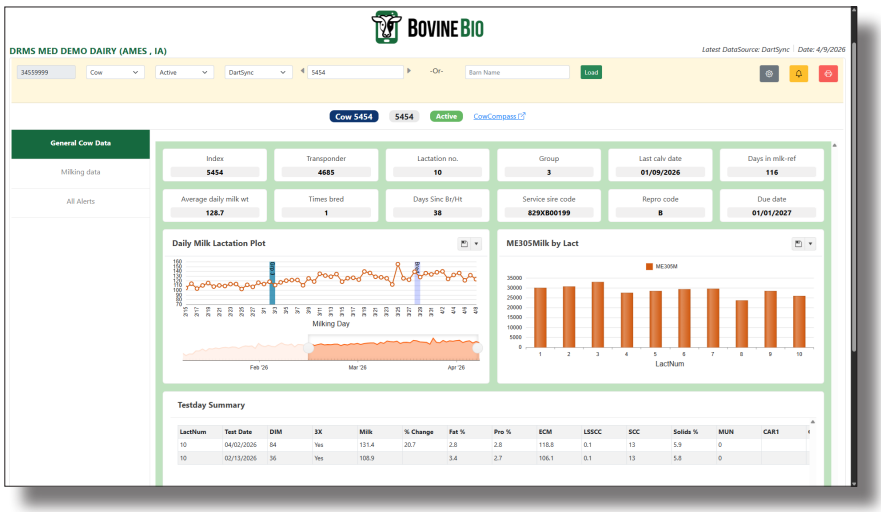

View Existing Dashboards

1. Select **HerdHQ** icon in Dart or Log in to **drms.org** then select the **HerdHQ** Menu followed by **BovineBio**.
2. Choose previously created dashboard tabs or view all alerts
3. Choose between Cows or Heifers, Active or Left animals, Test Day or DartSync data, enter a specific animal to view or scroll through the herd then select **Load**

Create New Dashboard

4. Select **gear** icon
5. Select **Add Tab** button then give new custom cow page a name
6. Choose desired database type from dropdown menu: **Item**, **Graph**, or **Grid**
7. Search or use **DBI dropdown** to filter available data
8. Select and **drag** desired data item to the center viewing area
9. Choose **data type** between Test Day or DartSync and select box to set as default, if desired
10. **Save** changes and view resulting dashboard

Watch for a follow-up *Tip Tuesday* about setting up alerts.
